## **DETAILED ACTION**

1. Claims 1-20 are pending in this Office Action.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Jurafsky et al. (Automatic Detection of Discourse Structure for Speech Recognition and Understanding).

As per claim 1, Jurafsky teaches, “a method of determining user interactions comprising the steps of”:

“determining speech information” (section 3 Dialog Act Detection);

“determining discourse functions and prosodic features in the speech information” (section 3.1 Prosodic Dialog Act Detection);

“determining a predictive interaction model” (section 3.1 Prosodic Dialog Act Detection); and

“determining an interaction turn based on the predictive interaction model and the determined discourse functions and prosodic features” (Section 3.4, The combined Dialog Act Detector).

As per claim 2, Jurafsky teaches, “in which the discourse functions are determined from automatically recognized speech information” (Section 1. Introduction).

Art Unit: 2626

As per claim 3, Jurafsky teaches, "in which the discourse functions are determined based on a theory of discourse analysis" (Sections 3.2 and 3.3).

As per claim 4, Jurafsky teaches, "in which the theory of discourse analysis is at least one of: the Linguistic Discourse Model, the Unified Linguistic Discourse Model, Rhetorical Structures Theory, Discourse Structure Theory and Structured Discourse Representation Theory" (Sections 3.2 and 3.3).

As per claim 5, Jurafsky teaches, "further comprising the step of scheduling an interaction event based on the turn prediction" (Abstract).

As per claim 6, Jurafsky teaches, "in which the prosodic features include at least one of: a silence preceding a discourse functions; a silence following a discourse function; rate of speech; pitch frequency; changes in pitch frequency and volume" (Section 3).

As per claims 7-20, they are interpreted and thus rejected for the same reasons set forth in the rejection of claims 1-6.
